

PROGRAM MANAGEMENT OPTION

Managing Complex Programs and Executing Sub-Projects

ONEPOINT's Program Management Option allows you to plan and manage large, complex projects and dependencies between related projects easily. Splitting projects into sub-projects and to distribute responsibilities across multiple project managers is supported. Each sub-project manager can then decide which activities are visible in the overall program plan.

Support the overall strategic goals and vision of your organization by using the program as a centralized coordination point and focus on managing related projects contributing to the vision

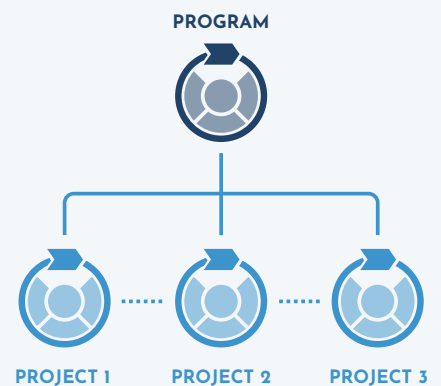

Reduce costs and time to project by improved management of project interdependencies through utilizing synergies and transparent communication within the program

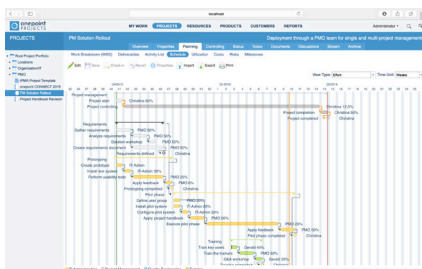

Reduce risks and impacts by dividing responsibilities across multiple project managers and benefit from more transparency through interlinking activities between program and sub-projects

Effectively manage resources within a program through easier prioritizing activities and react flexibly by moving resources accordingly when changes in demand occur

FEATURES

- ✔ Splitting large complex projects into a number of related sub-projects and dividing responsibilities across multiple project managers
- ✔ Adding a sub-project automatically creates a program
- ✔ Interlinking dependencies of activities between sub-projects and the program
- ✔ Automatically aggregated data from sub-project to program level
- ✔ Status report filing for both, the program and sub-project levels, and overall cost and progress tracking with version-controlled program plans
- ✔ Including sub-projects to multiple programs and linking programs as sub-projects to other programs
